Epistaxis

Hemoptysis

Hæmatemesis

Hæmaturia

[illegible]

at bed later sliding down in bed, can't breathe.
Sings in a generally favorable - sleep better, skin
better - tongue lips red -

Sublethal temperature alternate heat & cold - hot dry skin
when feverish - face full & dark eyes heavy,
folds severe head ache. Eruption of spots small pale
hot tongue - tongue brown fur - hard

Pulse is small, minutely observed, hard tense frequent
fluttering & irregular, tongue dry & brown, vomiting scum
bilious matter - after some days tongue red & cracked
off.

Gasping when raising head - Comatose - looks like death
in the day - petechiae blood discharges & dark color
clayey cold skin - 5th to 20th day is extent of
coma.

Progress - all except unpar when lips in cherry
& arterial power, insensibility to stimulants holding
in a favorable way. boil.

Prognosis - Treatment. Typhus is common
of infantile type, it may be very fatal however. The
typhus first indication to indicate a violent
inflammatory condition in the system, typhus is a

Sulphur - 10 parts. Sulfuric acid - 10 parts. Water - 100 parts.
In the mixture - keep bottle open with Rhubarb in each
corner. If stomach nauseated. Sometimes will be better. But
the best. The stomach will give some pain & then
Rhubarb in Colic. In the Sufferer & in the Sufferer with Sulphur
the power. The acidity increases. Since when Sulfur
is added. The stomach is painful. When the stomach
is better, the Sufferer & the Sufferer, if the Sufferer is
It you is not better. Sufferer is better. Sufferer
Not checked. Sufferer is given in small doses.
We have about time in Sufferer. Sufferer is better.
Mercury does interfere with the Sufferer.
Make you patient. Sufferer is better in bed.

Sulphur - used by ancient in religious rites - Native Sulphur
of Volcanic origin it is chiefly of brown color. It is also found
in the Sufferer of Sufferer. Roll, rolled up into
Sufferer. Sufferer, in

Made of Sulphur formed by solution of Sulphur in water
by precipitation of its Alkaline Compound by an acid.
It is recognized by being white. Sufferer is better.
best way of Sufferer. Sufferer is better.
When put in water Sufferer is better. Sufferer is better.
Made in the way. Sufferer is better.

being obtained. It is a colorless acid from about of O_2
from SO_2 - It burns with a bright blue flame
at high temperature. It is a weak acid -
It is a perfect solution in boiling oil. For
acids form with Sulphur Hypo Sulphuric acid & Sulphur
acid. These are
but they are quite burnt iron wire with some little

Oxygen - 1 to 2 of O_2 in Sulphur in
Sulphuric acid - Make 6 of Sulphur in
Oxygen gas - Tin or Manganese part to 2 of Sulphur
not - It is off in gas & collected over a Mercury
It is composed of equal weights of Oxygen & Sulphur
32 100 Cub inches by 4 grains, when it is
and it is fluid - when it is 4 is again gaseous - when
it is 4 it is therefore not a solution over the
history life - when in a tube it is a solid
about by water it is liquid Sulphuric acid -

When frozen heavier than water - It
is that it deposits Sulphur & forms Sulphuric
Sulphuric acid with ammonia. Sulphate of ammonia
equal volume of each gas - 44 to 44 of sulphuric
acid - Sulphur with Oxygen is Sulphuric
acid - called oil of vitriol. When Sulphur is
burnt in Sulphuric acid by Oxygen - it is gaseous

Solutions also abounds by water - Sulphuric acid
It boils at 20° & freezes at 10° . It absorbs water
water great heat evolved. It burns from
to animal or veget. matter. I prefer animal sulphur
of Oxygen - it is also found combined with water
It appears practically identical - Solution in blue & white
pinks - Sulphur is generally contained in food

[illegible]

patient in under such state of depression - Roll down
a blanket - life only saved, on the whole, as usual
left. The congestion only likely to produce infection but not
very rapidly. If congested severe pulmonary infection, severe
discussible external cold & patient under the light of
becomes sensible to pain as when struck with the fist & is
fearful of being touched. Countenance anxious - when a
little he endures a very heavy sleep. After this infection
& Delirium follows - The brain is involved - & the system
will be much but for fear of infection - Treat
the patient properly & keep the blood - as far as possible
Important to know how long a congested leads to infection
from the system. First stage, day not last many hours
But Congest & Infection slip into each other - Distinct
Congest from Compulsion - the latter is vomiting - patient
laboured - pupil dilated

Congestion will sometimes kill patient's energies even before
Compulsion - from arterial blood - infection from blood
in the heart - delirium, pupils dilated but very
dark, stertorous breathing - involuntarily arch of the
face - Convulsion, come on & the other symptom become
aggravated - Depressions of brain ^{not} necessary to put
it Compulsion in the symptoms attending it.

like Hong Kong, Madeira - If barely too open for the
stimulate him rather too much than too little. In
the case of pulse not by hand or pulse or spoon
Opium if given should be in small doses & half a grain
stim effect - The Mineral acids - stimulate
Sweetened with Sugar to make it agreeable. Phos
or 1/4 grain every 3 or 4 hours - Phos apt to turn
black & Septic. Sinepion is much better.
In this aggravated form early recourse to Mercur
It changes action of system - equalizes balance of
Circ - & removes symptoms. Armstrong gave it
in dose of 1/4 & its alteration effect decided on 2 days
During whole treatment - applied with ventilated
functions immediate benefit - If there don't succeed
Fungation. Disposition to phlegm evident
in the lungs - from sluggish circulation parts
on 1/2 after to slough to prevent further ulcer
more frequent frequently & rub parts exposed with
soft & oil to hand - The want circulation causes
slough at bottom - Fetus obliterated by most successful
operation - Allogenic from filthy habits
but warm bath & you will find his condition
better from attention paid to him

Onset of Pregnancy 16th Jan'y. 5 - Prob an -

When in aspect & occurring from irritation it is alarming & prostrating (patient). The substance thrown up is acid & like water afterwards black colour - ~~afterwards~~ mineral acid.

The use of Emetics with saline but some think apt to abort. In pthoric patients I give it at times of preg. Opium & Calomel I have found useful - The Osim keeps bowels gently open. Sp^{ts} Turpentine. Local applicat. Camphor brandy, Sassafras, to Epigast. Rubbing the center of abdomen by take place. Recumbent posture.

Cardialgia - Inflamed late month & heavy heartburn & eructation of some acid substance - It is to be considered. Dyspepsia - Magnesia + Annon Zi Cinnamon oil. Water 30. Some Water + Castapp - If Longus Cathart will often relieve stomach - The mark on skin of children attribut to derangement of texture than the appearance of Strawberry mark, caused by warmth in the circulation.

Last stomach - Opium - 100 pills - 100 pills
 of Calomel - to complete cure. Eastern State of Good
 altered best - but with some anorexia in girls - if this
 should not be taken - the children - a package every 24
 Spanish Lotion - 1/2 of oil - Scoop of Lotion every
 1/2 in vagina - Transfusion of Lotion
 General of all things 1 package on Mamma - 1 package on

Shankha - May arise irritate of intestine by which interperitoneal
thrombosis - leads to adhesions with Paragore. Calomel
to induce an aggravation - Formula - Rhabarb & Carb Potops
with Opium

§ Poisoning by Arsenic - Symptoms depend to ascertain
how appear in natural situation - Person ^{much} intoxicated
at first of symptoms - if you suspect this drop water
in his mouth & after a while he is roasted - The symptoms
of arsenic poisoning are sometimes to be distinguished
with an accident would be, vomiting, burning of vision
stomach, slowness, breathing, coma death - Only tests
for arsenic - May be extra between the bowels &
nervous system - Arsenic - A blow at the back
of the head may be extra to the head - May
arise at more than one point

to be preferable to Alcoholic Stimulants - Attention
to scalp - but not very efficiently. Attention to be paid
to *Pons Vici* - Cathartics + Antispasmodics - Present
dysentery + loathing to the French form of Indian
character - Death is sometimes produced by
a derangement & suspension of the functions of
breath without asphyxiation - They recover
sometimes but with confusion of mind, loss memory

Dr. Johnson. Jan 16 Pneumonia Typhoid - spotted fever
It is epidemic - doubt whether contagious or not - occurs with
all the ferments + under different circumstances modified by
various causes - The determination was rapid to particular organs
particularly the Lungs - The symptoms much same as those in
Typhus Gravior. Depressed State of Secretions - I class it among
the circulatory fevers because Pneumonic symptoms are not
always present. Might as well say Typhoid is bacterial. First
in Bedford - 1806 - The winter & early spring times at which
it appears. Cause refers to some peculiar condition of
air - Believed by majority not communicable by contact
In England more prevalent about mill ponds & bogs.
The petechiae on surface did not occur so frequently as
in 1806. Did not afterwards appear in many sections of
County - Cause - Low diet - Exposure to heat
cold + all depressing causes

Symptoms - Chills pain in head + chest, partial loss sleep
Shifting pains, Cough without oppression chest, Depression of
stomach, heavy sighing breathing, haw. Tongue red +
clean, pulse quick + not bearing much pressure, then
very delicate going on to Rattling. Skin natural
Vigilance, sink into slumber. Convulsion brief.

Or if the pulse becomes fuller, breathing easier + steadily
increased favorable. These are Pneumonic symptoms
Unfavorable signs - aggravation of the symptoms,
dilatation pupil permanently - Duration of disease 6 to 12 days
As it occurs with us - associated with bilious symptoms
and gastric irritation resulting in biliousness. Tongue
thick + dry.

A peculiar set of symptoms as occurring with Feverish in Respiratory
Cough + whitening of skin.

The head + jaw, of Pale mahogany color. The conjunctivae
are the most discolored - But not protruding the, the cornea, is
not so great as in some cases - Death about 10 to 15 days
It usually attacks adult males + robust females. The disease is
Nagasaki - Recovery tedious - leaves no predisposition to
the second appearance - Contents of the bowels like
sand - Liver enlarged - Liver spleen generally hard + enlarged
Stomach contains dark fluid. Branches of the
arteries containing like fluid. blood dark color. The
smell of blood body not so offensive as the living.

Sept, or 17 Treatment Pneumonia Typhoid. Diversity
of opinion. Some condemning depletion, others advising it.
Pneumonia form with ad. more inflam^d at South than North.
Usually bleed here at once - Dr. Trent bleed from 24 to 50
ounces, at once happily - Circulation upon important
organs - the fluids are in torpidly circulated - Dr. advises
Cordials at the same time & Section - Cathartics used
at first - but when open inflam. bleed vigorously -
Those pract who Deprecate Depletion, recommend Stimul
Diaphoretics - Good form Solut Salty in Infus Section
We now proceed to other Stim Camphor, Vol All
Sp^l Minderer - External irritants to such parts
as are most in pain. Endeavour to keep surface
permanently warm - If skin hot & dry warm bath
Too much sweating however debilitates - If
this debility require Stimulants Other Brandy Wine
Clark Ammon in 5 to 10 grs every hour - Symptoms
of gastric or Hepatic Derangements - purge combined
with Calomel - Mercurial treatment advised -
All cases I have seen - Opium. which depresses
& requires Circulat & Nervous energy - May be
given alone or with Camphor, or as I have put
It has been in large Doses 50 to 100 Drops
Probably smaller Doses

proper. The common cases treated as they mentioned. B
inflammation. Cases - general practical rules guided - In
Anginous cases, blisters made of opium by the
mouth or enema

Patient getting better, diminishes from stimulants gradually
+ absolute tonics, - I prefer Sars + Cinch - Tinct
Muri Ferri - + other tonics - The cough troublesome
+ continual - treated on chest by blisters.

Hectic Fever - This is always produced by long continued
inflammation or irritation. Never occurs spontaneously. Usually occurs when
there is previous development of inflammation - May arise either
internal or external - In case of knee joint may arise from
it as internal - Apt to occur from Apoptosis or Tubercle
consumption - Not from absorption of pus - Excites hands
fully able to produce it without predisposition - The phlegm
temperament predisposes to Hectic. Apocaula Muri debility
2 paroxysms - no distinct apyrexia - Come on with chill
+ rigor - the morning paroxysms from 10 to 12 o'clock day
when there are 2 paroxysms - The night sometimes before bed
The day not remarkable for sweating - The night sweating
copious - Hydrops, cyanic tint - Heat skin
Pulse 100 to 140 - frequent quick hard & jerking

face, tongue red & clean eyes sparkling
Digestive organs preserve tone when that function is
deranged - low spirits - If not patient is left full
of hope - Anata pearly white, nails adune - the skin
eye by absorption of adipose substance in cellular tissue
Treatment - Palliation, Surgeon's Knife if can
remove parts. Opium. Morphium is better in Cancer
determines too much to brain - Opium water is considered
the best aid - French say continue invariably - The club
Mund Tricy have been employed - Myrrh Zii Carb
Potash Zii Sulphate Iron Zii - In 60 water
continued every 3 or 4 hours - Tonic in light
Dose -
or more - 10 grains to 3 grains per chloro Mercury - Antidote

D. Frost January 24th - Applied Mercury in case of Dropsy
Cancer, Hamillity. Under the toxic punction induced a
Stomach & Spleen - Calom begins action higher up than
other purg - Tasteless, therefore easily kept on Stomach
Induces a new action in Hepatic system equalizing
& balancing the secretion - To be continued until salivary
secretion - Benef^l effect relapses less frequent than
before - Purg & diaphoretic function when Calomalyse
very tardy & relapse occur from slight exposure

Disposition to ~~relapse~~ indicate dangerous pathology by their
caution in its admin. - always. It is slight Merck in effect
until slight tumefaction & loaminess grows - examine the
virescence to observe change from their offensive & bitter
bites & expand the web mercury - 23. When expect slight
examine every visit grows, patient it if later give instruction

In Intermittents, not so import except when indication of
abdom. viscera - Decid. Park as a purge.

In Typhus, fever & more relieve, irritation by expelling food
contents of intest - in last stage, stimulate critical system
Pituitary spots - loss in balance venous system - here this is indicated

In Hepatic - Venous system - portal circle relieved & system is
lowered to that state when more act. In rapid cases give
in low doses, to prevent suppuration - 20 grains, etc.

In Angioma cases - Radical advisable - as there can be
as much minimal - or gangly, as Cancer, Sub.

In Inflammatory affection - useful in Ophthalm. & nasal
or inflamed viscera - as, Precipitate, Phos. &c.

D. Hamilton. Had a, was, & ad. it is a relief
very, especially after a few days.

In Cynanche Trachealis - Best seen in local phlegmonous
action, the sections of Capillaries affected by, warm bath
&c.

In Fever, high excitement - disease to crisis before the
induced - by want preparation - In Tubercular

important on the first - but in symptomatic pathosis
Hepatic Path. advised - In colic in combination with Opus

In Pneumonia aff'd connect with ipisac - Don
virescence or more frequent Salivation - Symp. &c.

should be given in large doses. - In Dyspepsia -
you should not only attend to Aliment Canal but to Liver
In Cholera Morbus - It always gives cramps & acute
acute bile & noxious - rapid & small space. - It is
in pill & powder with 1/2 grain every 2 hours until
relief afforded with warm forest & Sinapisms -
In intestinal cramps Children, a gripe, broken off -
bein first antispasmodic & fennel - 3 grain Cal. prep Chalk
10 grains - ditto food in - one night & morning - found
by some with Calomel - The benefit here depends
on direct upon Liver - Because of its internal - Open
wholly inefficient - I have seen it die while under its
effect - of rot - In Dyspepsia - In Dyspepsia

Rhinitis - Polypii. Has been considered as tumours - more
frequently in nose than other cavities - It is malignant & benign
Cancer not known - likely perisporic - They must be generally
excised - Nasal Polypus - Patient snuffles, eyes watering,
on examination find tumour - hang by pedicle - Patient suffers
most in damp weather - They sometimes protrude at
nostril - other times a fast. nose - breadth between nose
increased - The soft kind is not connected with so much
pain - Operation - Knife & ligature - Knife
best - Forceps - Patient blows nose & force out polyp
It is then seized & forcibly extracted - if you cannot
get into high up give forceps Rotatory motion

When it is put in the mouth - it is a large flat - low - light brown - which is exposed to the mouth
from the side in a canal. The mouth is a small
opening for the tongue - a large opening - the tongue
only - when only portion taken over. Hemorrhage
by infection of any substance upon which pressure is made
Spongy shaped to nothing - Another place by Ligature -
it is almost impossible to place it at the root - the
circular - with the tongue - by changing color in
the lining. Tissue at the tip of the tongue - a small
Tongue - Excision of actual cavity - Excision
Dinner - Hemorrhage - Actual Cavity - Abandoned - Cavity
which is a small opening -

Have lip - usually congenital - sometimes a small
upper lip - sometimes a small - usually a small
the operation has been performed on mouth after birth - some
positioned - But wrong - if child can swallow - better to
Defer it for a few years - Convulsion up to the
with these after operation - Trisected - better
let the tissue - withdraw pin - if orbic and, in the
pupfish took it.

Received 24th January 1860. Packet of Nystrope
cyanogen - prepared by Decamp of Lyon France - it is a
in solid - Lamp apparatus
absorbed by water - consequently, on water, saturated cyanogen
Cyanogen - Nystrope -
Cyanogen - Cyanogen - Cyanogen - Cyanogen - Cyanogen -

Deliberate of getting rid of a hemorrhoid through
best means - by using a syringe only - the water
be absorbed into the hemorrhoid. By accurate observation
of the group it - the all one side. Commence
at lower end - Draw it forth - No very painful
Cauterise with Potassium Bichromate - Connect with
the segment of digestion - organ - Then the great desire
to urinate - After getting with the syringe
off the hemorrhoid - using a syringe - which is to
penetrate it - which is to be removed. Radical cure is
to cut out the sac by other means - The plan is to
use inflamed - 1st - lay bare from one end
to the other - 2nd - layer of Suture - some of interosseous with Cauterise
but not too deep - 3rd - lay bare the other end to urinate
but do not cut out the sac - Lay plan by injection into
by the end of the sac - draw off water by Cauterise + 4th -
draw out the sac with a wire - but it remains there until pain
is gone - of pain in back - Sutures & Sutures, to be
drawn out - the effect is - the cure not to infect it to
the rest of the body - If not cured not Stimulant enough
to draw out the sac - Keep Patient after the
operation in proper posture - Woods plan to
cut out the sac - If reason to believe
that the hemorrhoid is not cured - Pot. perm.

The remedy most prominent symptom - often
relaxing his grip - He calls to stand up for
I suppose some of them as good to go
The remedy is very new indication - I have spoken
of indication of inflammation. But I have seen
have reported upon it altogether. But I don't approve of
indiscriminate use of it - But when of course you
connect it with Typhus & careful about bleeding. Emets
by some who think it gastric. But I don't think it of
feather same - than before I am of Crediting - Domestic
Nights Salt & tartar very good in some cases. Partial
solution of Magnesia, not including any - Calomel
or Cal & Opium - another Cal & Opium - But I don't
approve of Chapman's Counterparts of what some 3 to 8 grs
3 to 5 grs of Speake. Clark advised even. Hoist with
Bath. It is the best of Speake great advantage.
I don't know against in combination - All Indian
remedy, give Calomel 5 or 10 grs. with
Opium - full dose all the indications. If a small dose
I don't give & only indicate - give 2j - this is the
maximum dose according to Indications. I can't
go further to 3j. In large doses relieve tension & the system
I have seen Salivation in 70 hours. I don't know
what other - But I don't know of any other to relieve pain

Cholera Infantis. Takes place at 3 or 4 years - all
complaints begin before 3 or 4 years. Onset of
the Infants. Not to be taken for an acute - with
little or none in summer - they have full - spring
periods with severe diarrhea - sometimes - children at
9, 10 or 11 months old in summer. Usually escape attack
but those who have been struck pass it on to others - but the
rash - think moderately severe - the rash is also a sign -
the face is mottled - all of the body - irregularity
of clothing - not sufficient - want of cleanliness, but
not fatal in Scaphalony, but - Attacks common,
fat palms, passages green frequent, lips dry
with tension - anus inflamed - abdomen is hard
draw up feet - moved even in sleep - tongue
not changed - Often from horror & fright in the
type - vomiting - May be principal symptom
Diarrhea - generally stops about 3 or 4 days - tongue
covered with Epithelium - struggle with the disease
endeavors to bite over themselves - the face is
or the abdomen may last many months - post
mort - slight black on intestines only, also in the
but usually other marks of typhus - when
coming from temporary causes like in cholera
always spoken of - Opacities - Opacities

During whole course of life - I have
often seen the dangerous fluid - may be made
attractive to get - but such as will not
go into action, fermentation - if it is too
out of back - heart should be appropriate
to age of child - but the passion of
appetite - I find strong taste, which is
perfectly clean - but with such strong
flavour pollen - One of other problem is
found in country - the day I have seen
keep the in open air, but better if possible
if not cold air - rain - but
that year over - or with first part of
entire food - after very long
to get - soft then, & after some time
milk - then - but I have seen it
that for rest - which is better of the
children - taken as a child of water

Under school + 1/2

2. In many cases, the part over State of Information -
of health, difficulty, & reproductive capacity. But

in treatment - To prompt defecation - blood drawn from
large veins at first propounded - then Emulic. best is
Tart. Potash with Opium - In Proctitis, in
acute & chronic perianth, & rectum - they must be made
to rest - & must not eat Opium & (Excretion of
urine) - still continuing & discharging Nephritic Urine
of pale & pale coloration - From Hippocreat
which have been reproduced - I speak only
of first stage. & afterwards only after soluble
substances action is obtained - & after the
urine is to be kept in the - Tart. Potash had
very much been used - But must not be used
in inflammatory action - in fact in no disease
of the Urinary system - or Pale Urine & Urine in
general is to be treated with Calomel - Dover Powder
or other means, cough & allowed repose. Put
them to rest

The danger, but which however is not the disease, yet
to the liver system. It takes is not at first visible in
itself, but becomes so when initiated. You must first
begin with the danger. The liver is kind but very
I have pretended the disease by frequent small bleedings.
Weeks & days cutting her to the quick. When should be
alternately applied to all parts of the throat, but the
not of so much advantage. Hardly has been seen
= and - after the upper lip. -
I do not like them from the ability they are apt to procure
to the danger. Digitation should be used, but not with
the liver in that position. Colored and hard dry
to when it is carried to the great ^{trough} towards the pharynx, I am
generally taken into the system, but when it is
one of it, efficiency. Generally confined with Colored
Digitation & with 4 or 5 drops in the throat. Given here
in all together inseparable. When here
The patient should avoid all exposure to cold, but
in summer he should take exercise in a warm place
to his throat, if not his system, if always keep himself
protected by flannels & heavy stockings.

By cutting out the water in the bottom

become we are made for the light - he has them open
divides of the chest. He says the lungs have first a
gray appearance (which Bock has called albidum) the lungs
themselves to call off a larger share. These
at first are orange flesh color, then become indurated
sometimes after the invasion they get a light & a kind of
has a speckled, first incipient, but afterwards offensive in
the highest degree - the opening being made for it occasioned
by the removal of part of the glands of the body & the
very effects have most of the glands of the body become
indurated. Indeed, seem to be undergoing - for they are
now observed in them. With regard to it I could not learn
always spoken. Bock says it may be pretreated do you
think. When the inflammation has been so slight as only
to form one or two of these tubercles, you have seen chance
of getting, but on the being coughed up & great care taken
to avoid exposure your patient may be saved. It appears
from observation that condensation is not so common as it
was
Now a physician we know to attend these cases of the disease
with the strongest exertion to cure - how grateful must
be the feeling of him who has ~~the~~ by his care & attention
saved one of these unfortunate from the grave almost
open to receive him!
Now I think you is the Politician the Radical
and first the Politician. His prominent symptom is
the ~~inflammatory~~ inflammation, which begins in

The acute state of a poorly situated, the whole body
thinks, the mind as above, &
for a long time the digestive organs are in good state the liver
of the patient will be excellent - it is gradually observed that
they are peculiarly bright. This distinction has been applied
independently however, to the form of consumption

Dyspeptic Plethia is always attended with dyspepsia
as in even the codes in affections of the digestive

system. Since you see diarrhoea appears with colic
dyspepsia, they may be considered separately & together
the former indeed an upward appearance, is dry, the latter
is covered with effluvia & does.

Plethia may exist when none of these symptoms present
themselves. I attend a German who was thought to be affe

cted with dyspepsia & attended him towards with
the dyspepsia his lungs were not a good map of the body.

He had no other symptoms of disease than a low fever.
The dyspepsia is now mild & depends much upon

the case taken by the patient the physician. It terminates
usually from the 9th to the 12th month, although many instances

do to be met with when many have been
one without the patient opening material words. I know

of codes when the liver of plethia they divided them into
plethia, by the very great case they have taken to
avoid all those cases that tend to excite it.

1871

1871

Tuberculous Consumption.

This is thought by G. B. to be the only true form of Phthisis, & the peculiar development of the lungs, it is not epidemic as in other diseases. It has been supposed by some to be contagious & in some of the southern parts of Europe the bad habits of the individuals upon his death as he breathes. It is not thought to be the fact from the frequent occurrence of a wife being affected after her husband has been a little & a brother to a child, & even the attempt to bring the circumstances appear to me to be rather problematical. Every victim on his death shakes of the indolent manner in which it makes its approach. There is a hacking cough, the hacking somewhat & this is usually looked upon by the patient as a mere cold & may go off. It soon comes on again upon the application of a slight exciting cause, the cough lasting then a long time except the chest & dyspnea, an expectation of mucus tinged or streaked with blood with some phlegm & a constant especially at night.

It is common in females the menstrual discharge is generally stopped; but this is only the effect of the disease. Among the females of an advanced period, men with after abortion, & they are often anxious to preserve entirely of conservative operation to forest the invasion of the men. After frequently no result with the cold upon the back medicines & I think it may but to warm up of it. In the disease you will find the pulse quick has frequent & jerking often like the minute.

After first moments, pain on abdomen - supports
myself - Confused & dizzy - kept between
tough to receive discharge - The sensation not
be it with the stomach - all this & more but
nothing more - The blood you said had been
received - Came on for food to come on afterwards
called after pain. If ever again, let it be
to take. Confused - all this - very painful as
be given - Pain in tough from chest to stomach
Something to serve as to produce vomiting. Then
cold - If I kept that, after short but I know
of heat after but if I have associated with a
certain is often discharge. Oh, I know - I must
take care. When with it is a terrible
without heart ache - Bleeding & Mark Collection
Instead of this - I am of the same. I am of the same
- Can't not to get up for 9 days - But light

Perusal for - Something very close to
information - I have been generally the last
the blood - I will be given you put a
+ paper at Princeton - I am of the same. I am of the same
I am of the same. I am of the same. I am of the same.

Historic & Alton - In London - The effect of water on the digestive organs - then from it on the lungs & the heart - & the effect on the blood - the effect on the state of the system - The term influences is only by influence of the water - Haberdashers & the water - The water is common with you at great the water - The water is for forgotten fully like I feel, and like. 3 or 4 days - 1st full growth but about 10 days, afterwards more at shorter periods - & at last - The most effect of deposition of water - the water of the water & phosphate of lime - Historic part -

Peter's part - May think so with age - The water is for forgotten fully like I feel, and like. 3 or 4 days - 1st full growth but about 10 days, afterwards more at shorter periods - & at last - The most effect of deposition of water - the water of the water & phosphate of lime - Historic part -

Painway - The water is for forgotten fully like I feel, and like. 3 or 4 days - 1st full growth but about 10 days, afterwards more at shorter periods - & at last - The most effect of deposition of water - the water of the water & phosphate of lime - Historic part -

In incipient stage if action was in the same direction
had patient quiet - "Catheterism" should be done. Water
be instilled in the stage. Patient will improve see from
if better. Catheterism continued to keep down, isolate - No
excitation from the eye. Perfect rest to be strictly observed
sometimes apply the spray. If cannot rest in bed
if need - Anodyne might be used by patient to keep
the limb quiet - if the patient cannot be quiet - If all
take care to keep the limb quiet.

D. Dickson - Gout continued. Little trouble seen in the
nervous system on left side in no action. Patient apparently
Treat with white Phosphorus & Arsenic - Small best
Gastric powder - Should not expect good from it in this
patient. Phosphorus and the Arsenic for some time
But it is evidently the last word of treatment - Phosphorus
Powder with aromatic or Sal. Sulf. Sweet - Should be allowed to
be much as patient can take - When the patient is in bed
the phos. should be given at regular intervals -
Gout d'Haffon - Gout d'Haffon - Catheterism continued
by Homer - Phosphorus induced action from the 4th fresh water
action - The local application. Each specimen of the
has some question made of action - action - Catheterism
Blister, Phosphorus, Euphorbia. Arsenic inflame some paralytic
treatment - Large number of blisters - Blistering - When it
knew this more good than in small quantities. The patient
thought local application of blisters to the limb.

from seeds, the problem is - Temperature, the soil

Rheumatismus or

The characteristics of rheumatism as assigned by Dr Cullen are pyrexia - pain about the parts following the tract of the muscle affecting the ~~the~~ knee and larger articulations, in preference to those of the feet or hands, increased by external heat, the Disease is distinguished into the chronic and the acute, being known by the former appellation, when there is no great degree either of inflammation or fever present, but merely pains, and by the latter when both fever and inflammation exist in a high degree.

It may arise at all times of the year when there is frequent vicissitude of the weather from heat to cold but the spring and autumn are the seasons in which it is most prevalent and it attacks persons of all ages, but very young people are more exempt from it than adults, those whose employments subject them to alternation of heat and cold are particularly liable to Rheumatism.

1
The first thing I noticed when I stepped
out of the car at the hotel was
the cold. It was a sharp contrast to the
heat of the car. I pulled my coat
tighter around me and walked
towards the entrance. The lobby was
large and empty. A man in a
tuxedo stood near the front desk.
He looked at me and then at his
watch. I waited a moment and
then he spoke. "You're late."
I looked at my watch. It was
10:15. "I'm sorry," I said. "The
train was delayed."
He nodded. "Come on. Your
room is waiting."
He led me down a long hallway
to a door at the end. He opened
it and I stepped inside. The room
was small but comfortable. I
took off my coat and looked
around. There was a bed, a desk,<
and a chair. I walked to the
window and looked out. It was
dark outside. I turned back
towards the door. The man was
gone. I closed the door and
went to the bed. I lay down and
thought about the day ahead.

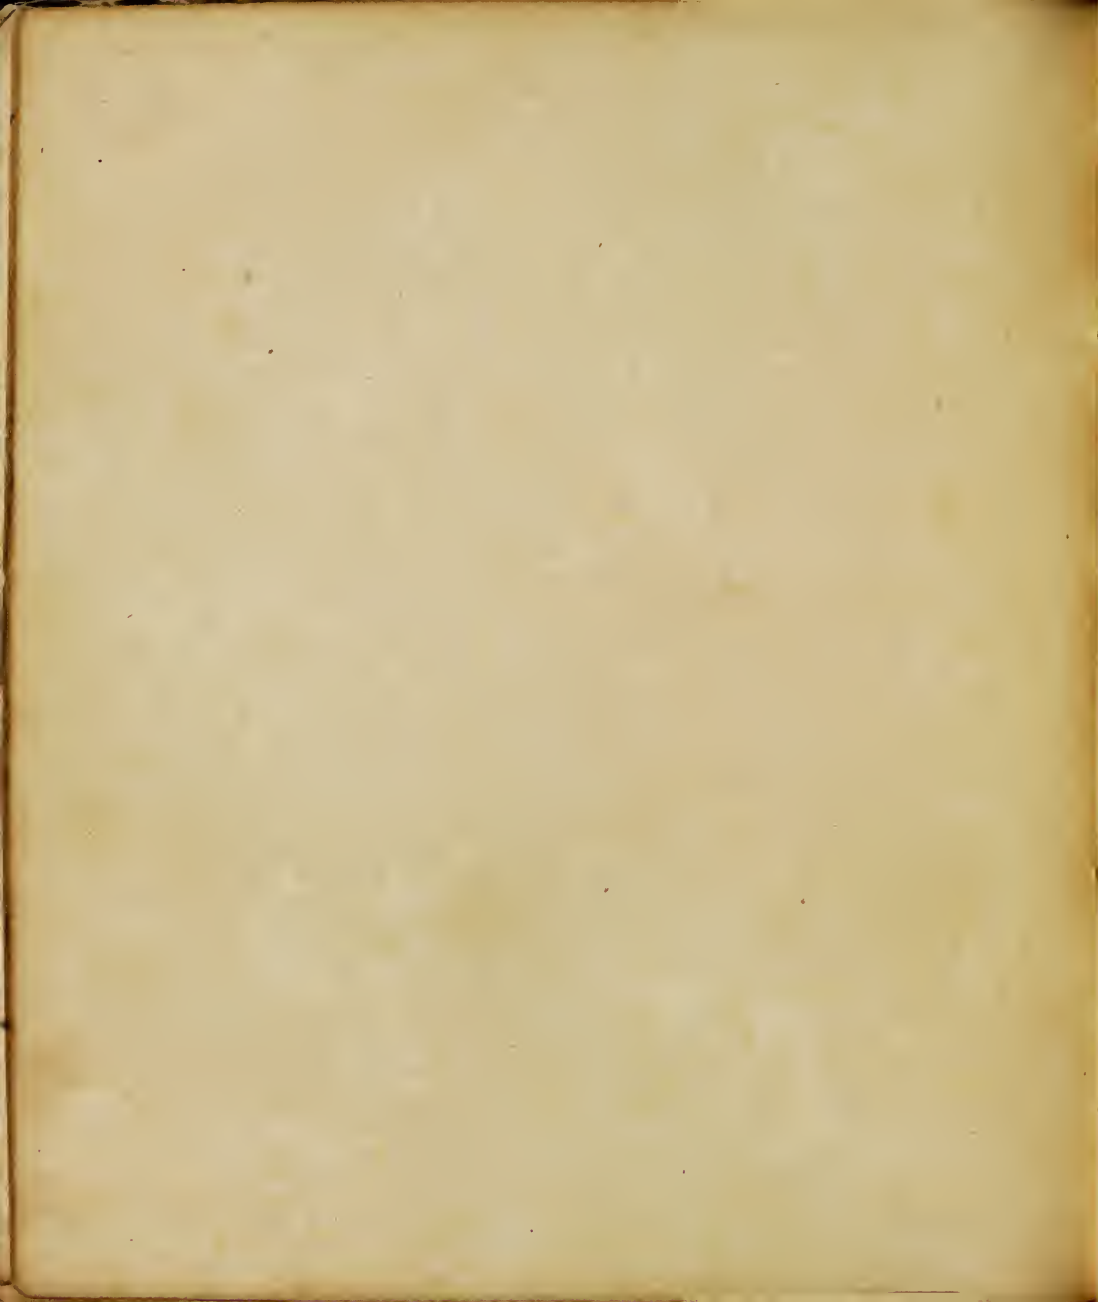

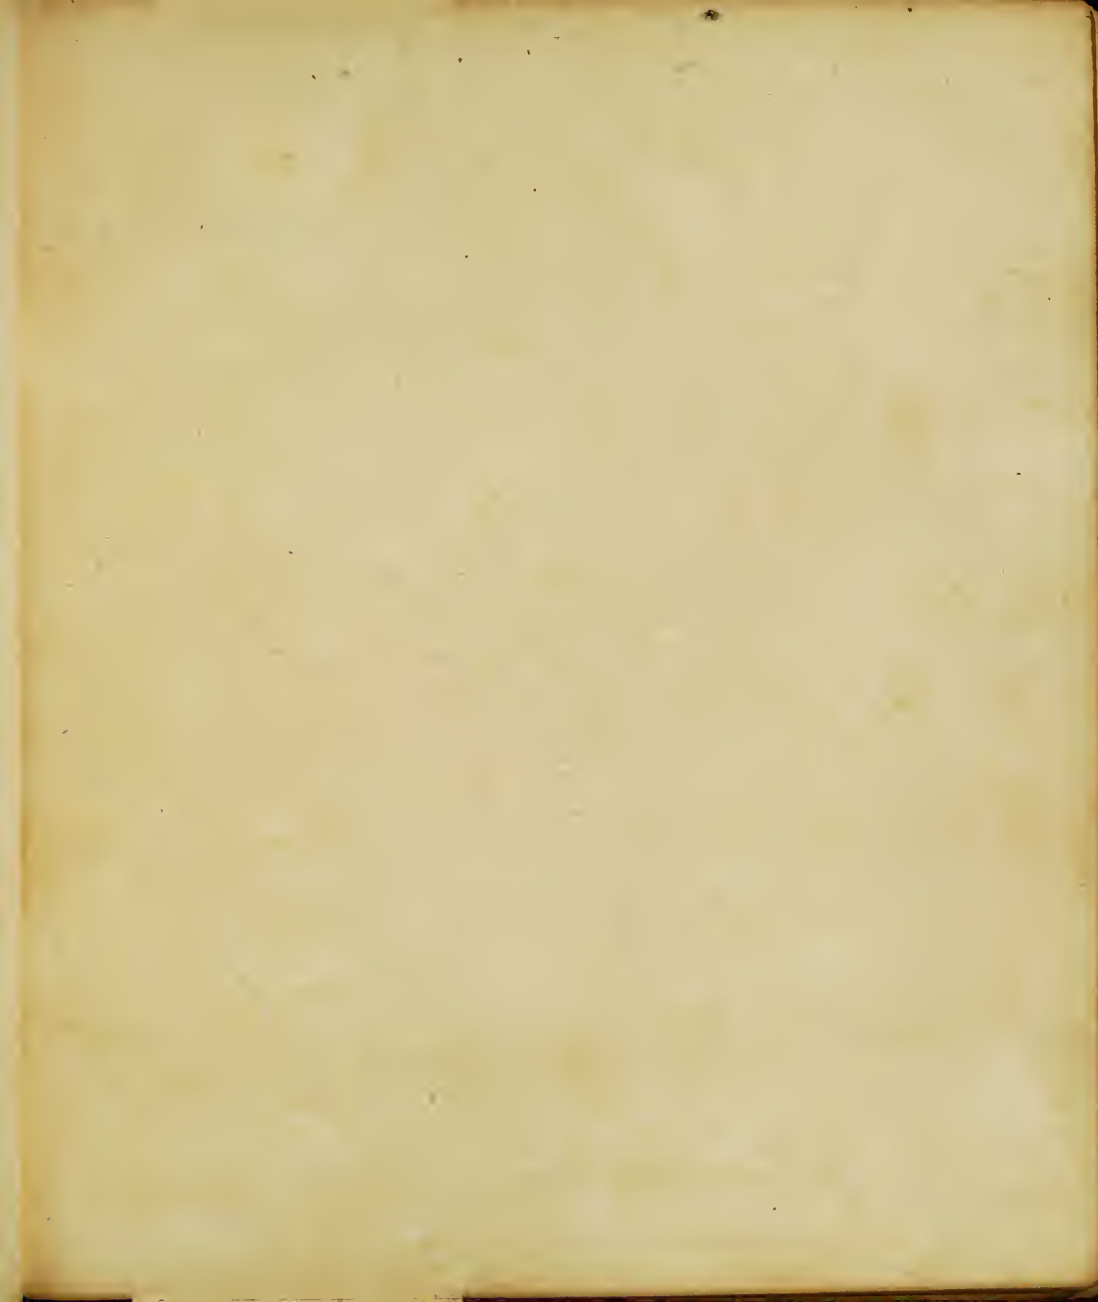

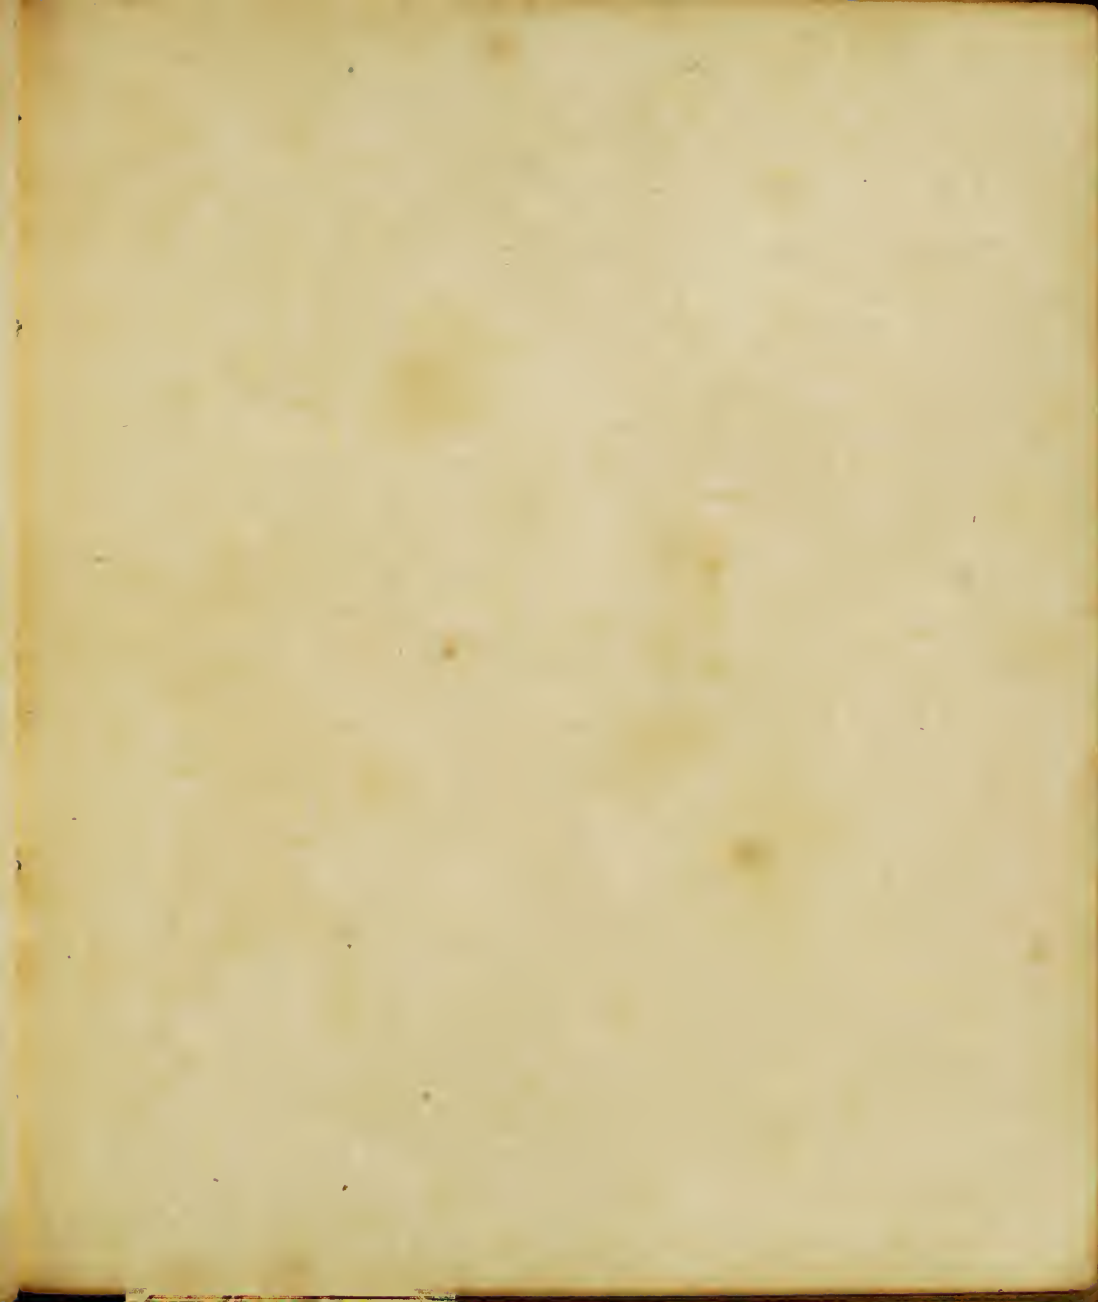

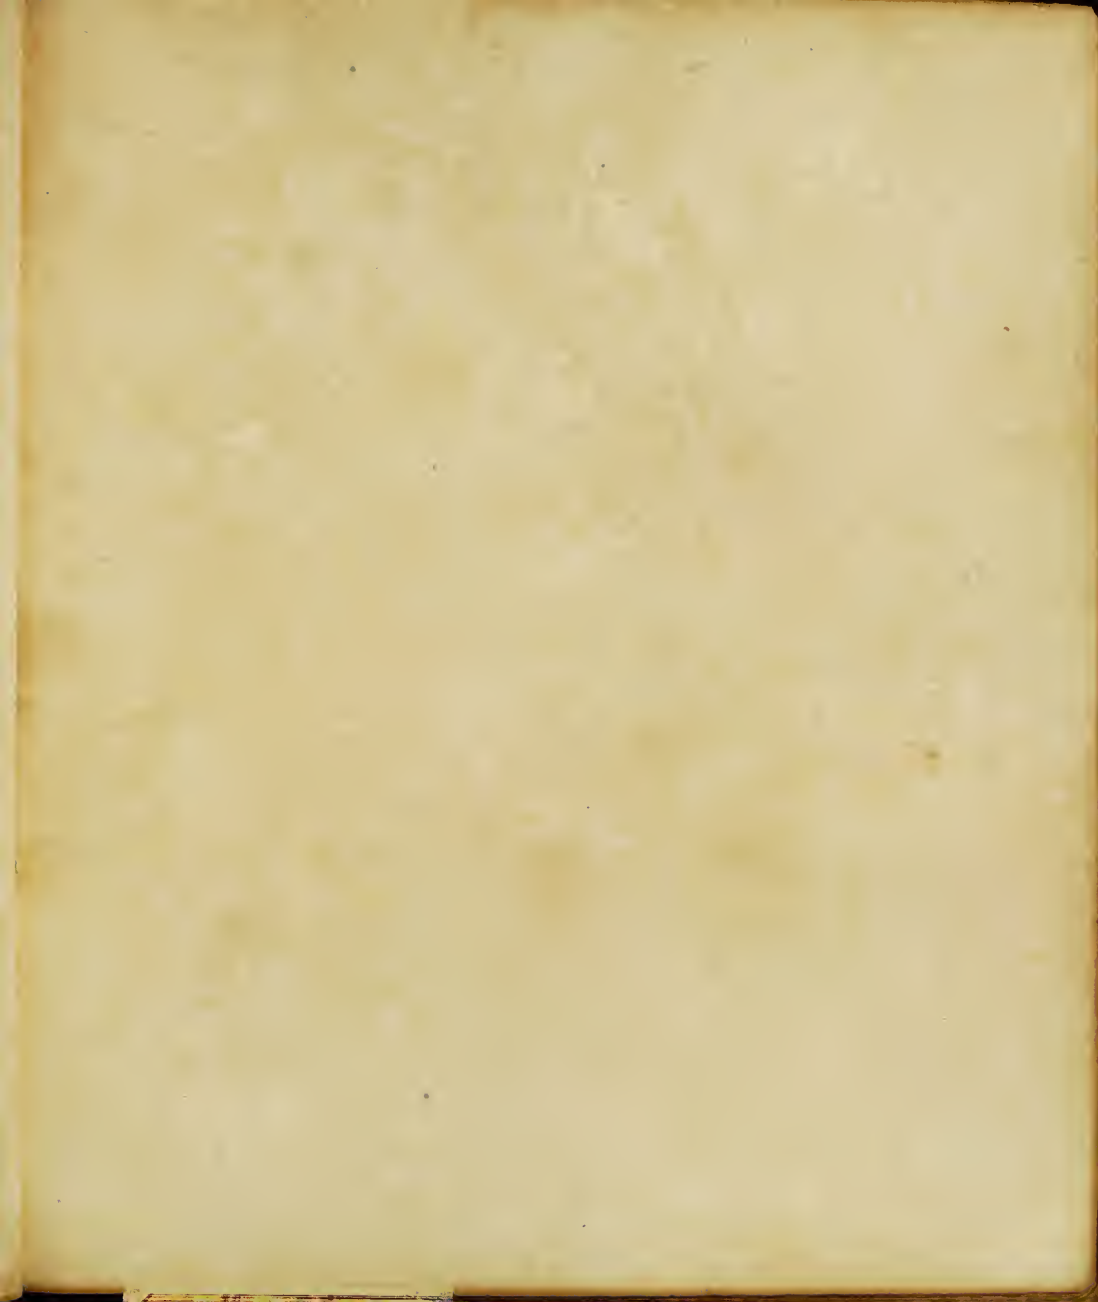

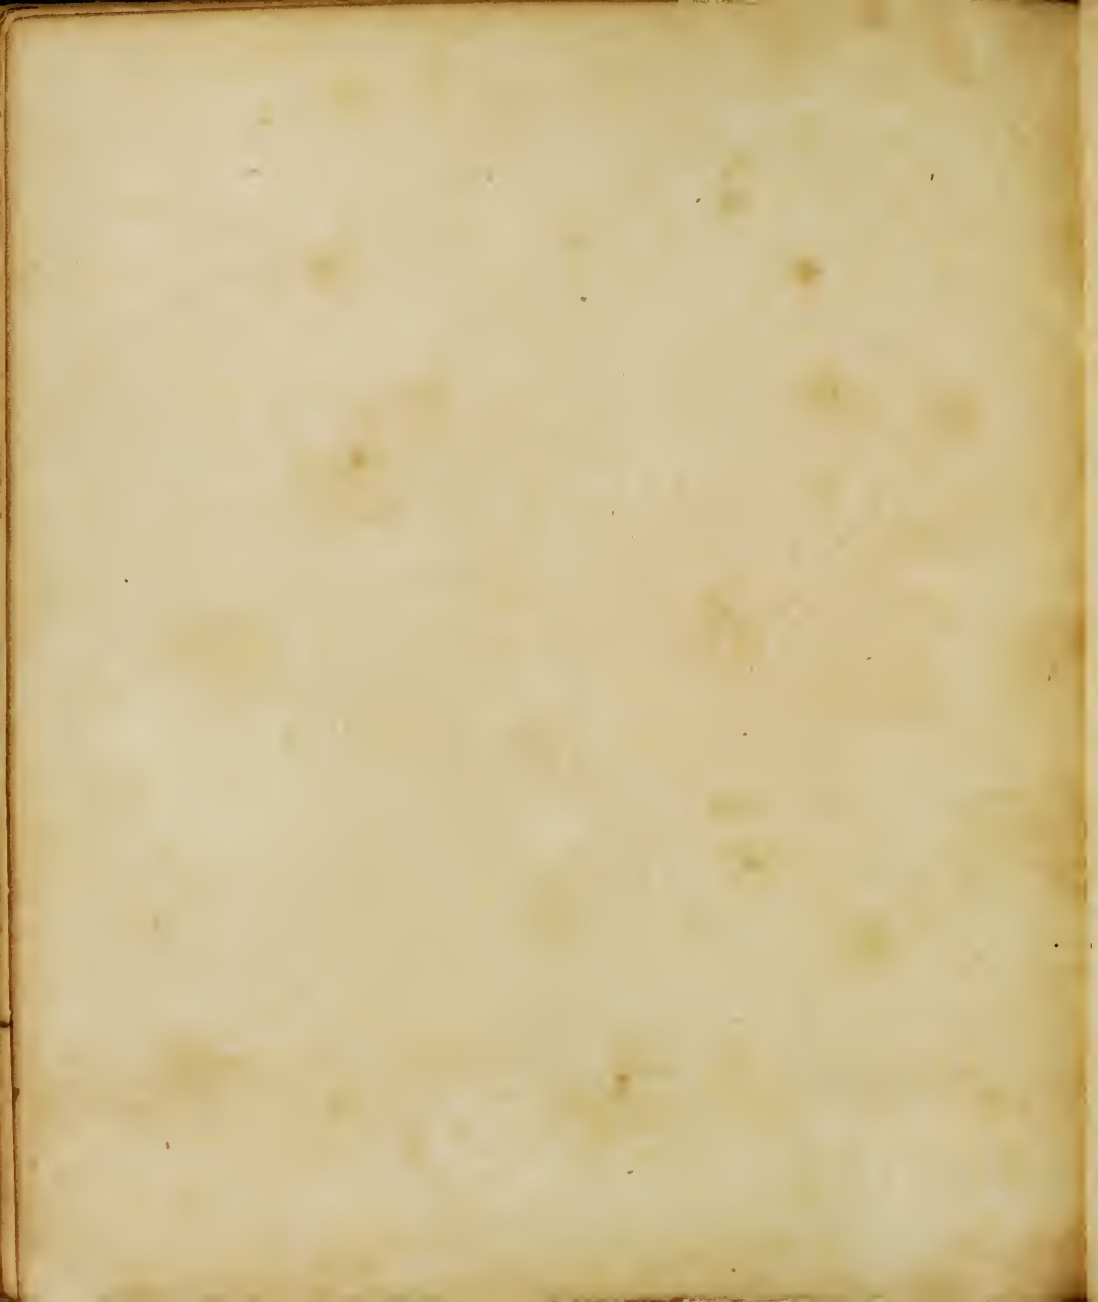

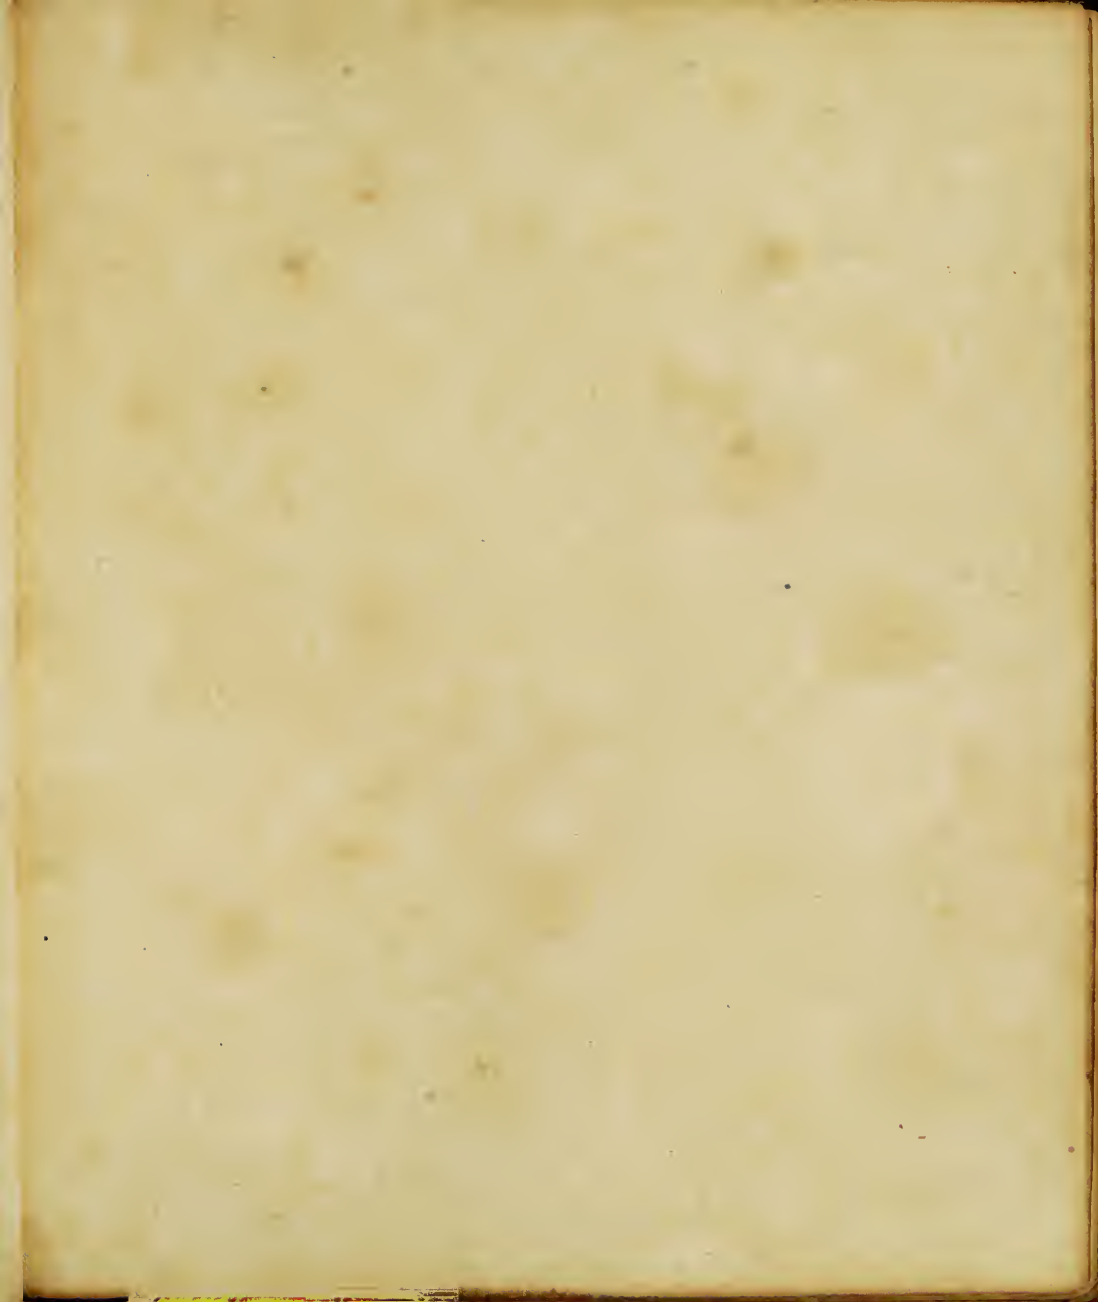

of those who -
 those during passage of them - & those
 when intoxication is habitual. Office - customers
 to keep it back - before before - by the return, and all
 houses - before before of them - I don't see of the
 the end. Those I see after the look - ^{never, and only later to}
 then - ^{the paper - health.} Simple disorder
 & not much more. Repair of relation is also begun by
 but only in the of meat - much of moderate eating
 then to drinking - ^{the relation - gradually abstinent}

Symptoms

the Minister in his time against slavery administration
 the Minister of State

infected - hence the ability that some articles have obtained
in the cure of scapula.

Many physicians with considerable at their hand believe to consist
principally in rearrangement of the digestive organs. By keeping up the
healthy state of these organs, great advantage certainly result.

Nothing is more true than that the tone of digestive organs
facilitates the cure of Meas.

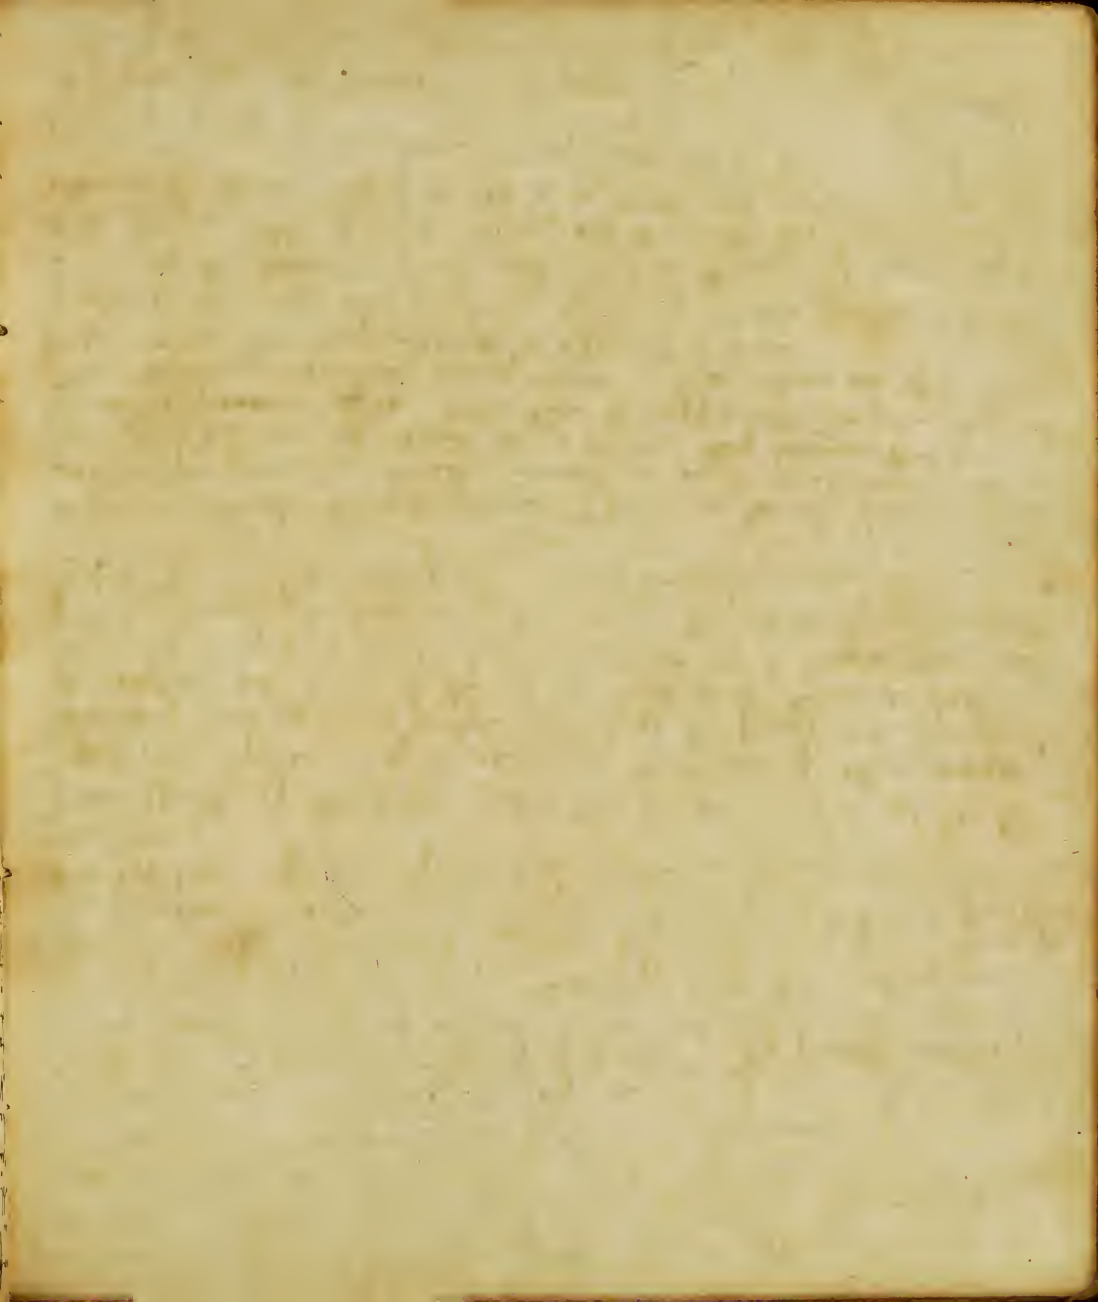

disorder. The first object is to try the alterative effects of Mercury
the use of Mercury will however bring into action. Colic, Dysentery
skin may take place when we go too far with the use of this article
symptoms of Meas. Very small doses should be administered - not
more than 1/2 grain at a time; & they will not interrupt the other

medicines which may be indicated. Purgings will always
relieve you partial after Meas. already - & will often become more
pleasantly - I have used with advantage the dragee. Peps. with
Of Meas. I will here speak. Bile, Chalkiness, other things &c.

have been productive of much good - particularly when the
digestive organs & the gastric strength are debilitated
At times well formed given with a view to correct the fluids
but it is the stomach which it induces.

forming Bile of organs, calcia does, however, then best deciding
in the system. With regard to the best drug, probably it compares
with the empyreumatic principle was about a year

The culture of Meas is the least disagreeable.
The continuation of the cough with Measitic acid -
as they have been recommended. Muriatic acid -
gr. l.

new formation - in the young the glands appear to be most
affected. These local effects are hereditary, communicated
from an affected of women who affected with tubercular affection of
the lungs, & of their children affected in like manner.
The evidence of existing coarcted rid of an oval - the lungs
hard being sufficient for its protection. The principle extending to
cavity of group of about 10 cords through places, exposed to
the riskiness of weather to decay. Below these cords are
infectious diet, but in all these circumstances that danger
the digestion & assimilative organs. No other day that a person
who had been affected by "out for syphilis" is much predisposed to
dyspepsia.
I will speak of dyspepsia under two heads - as it affects the
dyspeptic system, & as it exists in the form of blood & blood
dyspepsia consists in a contamination of the fluids & the blood & pathology
The disease will arise as the result of the chronic pathology
They may say it is caused by overgrowth of the prime vie, but
if these organs be diseased how can they prepare assimilable
the fluids. The disease
dyspepsia is I think always general & from a local disease. The
earliest symptoms are small incrustations on the neck & in the skin
These effects are not noticed for a while - they however put on a
different appearance after some time & disappear, separating into
clean discharges a white curdy matter. These ideas are of a bad or
purple colour are very insidious & difficult to treat
dyspepsia does not confine itself to the sympathetic glands but extends
to all of the salivary glands, the thyroid & in fact nearly all parts
of the body. The patient when affected with this disease in the lungs
themselves the small bones of the hand put to with collection of purp
which matter, hectic fever may arise & the patient at length
sinks into death.
Many cases of dyspepsia disappear & they has been attributed
to the last mentioned employment, but nothing appears to be more

side getting strong during disease. I think that it is necessary to purchase the blood that but the whole. Dr. J. H. Brown of H. I. has a case in his car when he found it necessary to purchase the blood that he observed that after the operation the kidneys did then duty in a reasonable manner. He should always observe the operation with much caution as by the danger abolition of the stimulus of distention on (kidney) may bring into an incurable dyspepsia.

Scrofula: This disease while unpermeative of any particular arrangement of system is called Acute Scrofula. It is not clear that this disease can occur spontaneously without hereditary taint. It may remain dormant in the system of a family for a century & then appear in full force.

Document of the paper, have the fore-mentioned it is
revised that the least should be used. As the speaker, it is
with great confidence. When you determine to lead I think
the best mode is to open the popular mind, bringing in
known in my estimation a better mode of education. The
electrical currents, we find here is best achieved by placing
conduct with other articles if present the formation of electrical
currents which have an insulating effect upon the conductors
Jackson's cathode should be kept up during the whole of
the discharge while there is any inflammable matter going on.

Murray has long been a fashionable case - it may be
used at first as a pump but I will not depend upon
it except as a pump.
I have no dependence upon electricity - electricity has long had
it overrated.
Dr. Watson has been advised - Dr. Moore says that it
is a better pump absorption of the fluid - Dr. Vaper
topical application has been recommended by Bellis
in certain dyspepsias. It is a good treatment but in the
stomach form you will find the water effects spontaneously
it appears to be caused by some morbid arrangement
of the skin originally. Your treatment here will be to
excite & restore the tone of the system - This you will do
upon general principles. You will frequently meet between the

Our hope that the disease may take a change - the belly is slow
the pain in the head abates, unattended, dimly as described
by Lathrop. The striking + dilatory increase of the eyes
and enlargement of the head. The head now becomes enlarged + the eyes
prominent + the face swelled. If a tumor should still keep at the
eye will continue to be present, but the patient will not last
long under the constant irritation. The presence of mistaking
the disease is small, the memory had the deceiving shape
+ dilatation of the pupil under it striking. The air being
extensive, each side of the eye the head has acquired. One
is mentioned when it may be affected + tricky in a
dilated eye as peculiarly of the eye, particularly when it
occurs in the eye. It may often be looked upon as connected
with peculiar cerebral structure. Along upon the head may be
perceived it as well as the indication of dentition appears to the
eye. It is chiefly attended to + to disengagement of the
pure air.

Jaundice - Unfrequent, not often seen in early called
for there is great hope of good result. It is most common
among those children who are of dissipated habits
The clinical appearance, in dissection and the common
quality, enlarged in proportion to the quantity within the cavity.
of the ventricle contain the water the brain may be in contact
in the form of a bulky bag. Some persons think that
conclusively confuting the absorption of the yellow matter of
the brain. It is seen when a cadaver when the brain
was no longer than a hen egg in 6 hours mortification of
the whole of the brain. The yellow matter is not taken the only
before the middle of the day of the brain. (excluding the rest)
of the eye, seen all the quantity of the common. (excluding the rest)
the appearance generally take place between the black

Hydrocephalus.

Hydrocephalus.
 Colera has divided the Nigralis
 into three forms + 4th. The latter exists in his opinion
 never affording a between the members the all the other
 when it is between the members the distance of the organs
 adjacent with group. However with it is associated the
 capability of the Nigralis.

I think it the effect of local inflammation
 I have said Smith says there is no inflammation here. But
 I am not sure. I must generally occur. I think
 with a few exceptions. I must generally occur. I think
 Smith says there does not seem any inflammation here. But all
 symptoms of inflammation do occur almost always - there may
 be some striking however. With laminae I believe that all
 bodies are connected with some degree of inflammation. Though

The pain in the head is similar in quality to that affluence in other
diseases. The perception is peculiar to young children - I met with
it often in a child some days of age - It denoting crisis in
the form of the cause of considerable difficulty in parturition.
There is pain in the head particularly across the
fore, dilatation of the pupils, gutta serena, longum, anisotropia,
costum.

The head aches much more, than it did today, when in the evening the pain in head deep seated from temple to temple, increasing, the patient thinks from the light, & really little, in fact, while sleeping & starts appearing uneasy - the pulse becomes permanently dilated & slow. The pulse is frequent & the face is flushed & bright. The duration of the disease is from 5 to 10 days.

 of mode of reasoning, the floor of nature is directly
 down to that the belly with a hard cystic in
 or - but I have taken the opinion without leaving
 any advantage.

The difficulty of breathing is most often due to the accumulation of fluid in the lungs, or to the accumulation of fluid in the pleural cavity. The fluid may be due to a variety of causes, such as heart failure, kidney disease, or liver disease. The fluid may also be due to a variety of other causes, such as infection, trauma, or cancer. The fluid may be clear or cloudy, and it may be accompanied by other symptoms, such as cough, chest pain, or shortness of breath. The fluid may be removed by thoracentesis, or it may be absorbed by the body over time. The treatment of the underlying cause is essential for the resolution of the fluid.

[illegible]

Ascites.

The patient & become gangrenous & to be washed
 with disinfecting lotion or solution of tannic acid & strict nursing & action
 We should make punctures in the extremities ^{if they} not enough
 than the absorption of a lancet - the best of them has
 the anal & rectal - the water in the gut in great quantity
 & very considerable beneficial effect produced on the system
 Abolishing an indurated rectum has to draw off the water
 the spot upon which they are applied being apt to become
 gangrenous - I do not mean by this however to infer
 that they should not be used when indicated by the
 situation or condition of a patient, when upon general
 principle they would appear to be useful. In the most
 gangrenous & anal when as to be applied, & the extremities
 not allowed to remain in a depending posture

The Gold bath is also very useful & is always applicable where we observe a glow upon the surface after it is put on we are not to resort to it when the skin is very pale & red; or when after it exhibits itself in a shining

or call state it is not to be repeated. Dr Meade of this city found his patients to benefit the absorption of water from the atmosphere. You will remember that in my Physiologic lectures I told you of the absorption of water in this way by means of the lungs, the surface. Dr Meade mentions a case where the patient from a distention of the diaphragm was made to breathe - his throat was swollen, but the way was placed by placing him in a bath of steam. Dr Meade also mentions that he never met the skin & the atmosphere.

Use of Joints is not to be forgotten. - There is a form of rheumatism which shows the Joints near Joints & appears to be the effect of bad air. This rheumatism with some amount of change of air will be likely to produce a cure. Dr Meade has spoken of as being Rheumatic - this is easily explained by referring the operation to the general tone of the system upon the system. Metabolic things have been a partance, I think improperly, to treatable ones. The attack should be stimulated by the use of water from the weather. - This may be given from the fountain being it difficult that being from the fountain being. That Meade denotes others upon different parts of

there is already formed. When there is displacement of
the heart the lungs, we may be induced to believe that
there is already formed. The formation of Pleurisy should not
be forgotten, but might cause it to be easily avoided
by draining, by mouth & by the use of an instrument -
the latter form it takes even without. When there is

Angina Pectoris.

I have also observed that the circulation. The blood appears to have been cut off who noted a decided it. For I found it had been cut off. The appearance on dissection many much - something the coronary artery as observed to be occluded. The heart soft & flabby, the nature of the heart is against splices, showing the great accumulation in the heart. Flaking of blood. After two or three paroxysms it is apt to become habitual. Exercise of a violent kind, walking up a hill, facing the wind frequently bring it on.

Diagnosis. There is a pain shooting across the chest, shoulder & down the arm gradually the left arm, a sense of suffocation - the patient feeling immediately both the beating is irregular the pulse differing at various times, sometimes being natural - at other times being irregular & quick. At later periods the paroxysms are excited by slight muscular exertion, they afterwards occur spontaneously & after a full meal. They afterwards I believe it to be a functional disease of the heart as it occurs in many instances when no structural derangement exists.

from the long a distribution of the vital power.
treatment. In case of the first stage, little can be
done - the symptoms may be mitigated, but a measure of
them take place after the very considerable muscular
action is made. One diet, not occasional bleeding
will be found the best palliating, with a little or none
near the region of the heart.
In the second stage of case, we are first to the patient
in a horizontal position, and at the first to the patient
the nose with anatomical splint - Disasters may be
applied of electricity & galvanism related to.
After will in the third stage of case be regulated by the
discontinuity of each case. When physical in the condition
of some general motion of the mind it will be evident
adjusted to open the temporal artery or ligament vein, to
diminish the quantity of blood in the head - I need not
back motion forward of a thin motion as shown, by
patting & distal motion with the index as well as
stimulating exercise. The exciting causes for these are
shown clearly occurs in a short time past, while in
other patients many other symptoms of determination to
the head, which will very likely be removed by external
to do away the mobility of the system in these cases
we must resort to such as diet, music, & so on
all at right - See an, species of distal motion &c.

Syncope

It may be properly classed with the diseases of the circulatory function. When structural damage of the heart or the peripheral coats of it occurs, while we know of no disturbance at the same time in the brain. When attributing it to the circulation of the action of the heart alone for an explanation of its cause.

Definition. There is deep sighing or groaning, cold clammy sweat, vertigo, confusion of ideas, loss of sight & collapse of the extremities. It commences with a pale, blue, or ashy tint imparted by the skin. The recovery of the patient is more known by the skin assuming its natural warmth & an accumulation in the veins of the lower part of the legs & arms after which it attacks. It is sometimes hereditary. It is the distinguishing feature of the morbid affection of the vessels of the pale & the absence of the morbid action of the vessels.
